

sleeping bags

A BUYING GUIDE

374 Lt Bourke Street, Melbourne 3000 | (03) 9600 0599 | bogong@bogong.com.au | bogong.com.au

There are all kinds of adventures: small ones, big ones, extreme ones. That's why, when it comes to sleeping bags, there's such a huge variety. Which should you choose? Down? Synthetic? What's loft? And, what features do you need? Our friendly, knowledgeable staff are here to help you find a sleeping bag that caters to the warmth, weight, quality and budget that you require.

HOW TO CHOOSE

Sleeping bags tend to be categorised by seasons. For example, a three-season sleeping bag is recommended for use for three out of four seasons in a year (usually, that's summer, autumn and spring). At Bogong, we stock two-, three- and four-season bags, as well as expedition sleeping bags for extreme conditions.

- **Two-season bags** are typically very lightweight. They're designed for summer or spring activities in warm climates, to a lower comfort temperature range of approximately 0°C.
- **Three-season bags** are mid-range bags. They're designed for activities such as travel and bushwalking, where you're expecting mild to cooler conditions to a lower comfort temperature range of about -8°C.
- **Four-season bags** are for cold conditions. They're designed for activities such as bushwalking, ski touring or mountaineering, where cold conditions may be anticipated to a lower temperature range of approximately -20°C.
- **Expedition bags** are for cold conditions. They're designed for activities like ski touring or mountaineering where cold conditions that may dive lower than about -25°C.

OCTOBER 2019

CARE FOR YOUR NEW SLEEPING BAG

A down sleeping bag is not difficult to look after. In fact, with the correct care, you can greatly increase your sleeping bag's life:

- Avoid storing your sleeping bag in its stuff sack. If you have the room, hang it in your wardrobe or keep it folded on a shelf. If you have limited space, store your sleeping bag in a pillow case or purchase a mesh storage bag from us.
- Always use a sleeping bag liner to keep your sleeping bag clean. Dirt and body oils reduce the loft greatly. Liners are often cotton, silk or a cotton/silk blend. Silk liners are the lightest and most compact option.
- A well-used sleeping bag should be washed a few times during its life. It's far easier to get a professional to do this (we recommend Remote Repairs). If you do elect to wash your bag yourself, follow washing instructions provided on the sleeping bag and use only recommended down washes, such as Nikwax Down Wash Direct, available at our store.

TRAVEL & BUSHWALKING BAGS

Zodiac 350

Zodiac 500

Zodiac 700

ZODIAC SERIES LOFT 680-750

Primarily designed as lightweight travel sleeping bags, affordably priced. With generous proportions and features, sleeping bags in the Mont Zodiac range are also ideal for bushwalking.

- Ethically sourced 680-750 loft down
- Tapered-rectangular cut for room to move
- Box-walled construction for warmth
- Toaster pocket for air-activated heat pad
- Ovendoor foot venting system
- Full-length side and foot zips
- No cross block baffle for down distribution
- Oversized 3D zip draft tube with anti-snag
- Sewn with hydrophobic Epic Thread
- 3D foot section for greater comfort and reduced cold spots
- Supplied with ultralight Mont siliconised nylon compression sack
- Large poly/cotton storage bag supplied

BUSHWALKING BAGS

BRINDABELLA SERIES

This **NEW** series is made for bushwalkers and ski tourers. Sleeping bags in the Brindabella Series offer versatility. These bags have lots of technical features to maximise warmth, plus the ability to fully ventilate.

Features

- Tapered-rectangular cut means a wide foot section for room to move.
- Radial Arc Baffle System maximises baffle loft height.
- Differential cut between inner and outer reduces compression and cold spots.
- Vertical baffles on torso maintain down distribution for maximum warmth.
- Continuous lower baffles allow flexible down distribution between the base and canopy.
- Box-walled baffles for warmth.
- Large, down-filled '3D' draft tube along zip retains heat.
- Contoured hood with down-filled muff.
- Internal down-filled shoulder collar.
- Toaster Pocket in foot for inserting an air-activated heat pack (not included).
- Tuck-stitched baffles for seam strength.

About the materials

FILL 785–850 loft, 95/5 premium white duck down. Ethically sourced (Responsible Down Standard certified) down is treated with DWR for water resistance.

OUTER Updated (2019) Hydronaute XT™ fabric: 20,000mm waterhead; 20,000g/m²/24h breathability.

INNER Ultralight, silk-touch 15-denier downproof nylon.

ZIP Full-length YKK side zip with dual sliders and foot zip, with laminated 210-denier anti-snap shield along zip.

THREAD Sewn with hydrophobic Epic Thread to prevent moisture wicking along seams.

SACKS Includes ultralight, siliconised nylon compression stuff sack and 50L poly/cotton storage sack with care/washing instructions.

UPDATED Hydronaute XT™: More waterproof. More breathable.

Hydronaute XT™ is a waterproof, breathable fabric designed especially for sleeping bags. It's not only waterproof, but also windproof, which adds to the warmth of the bag by creating dead air inside the bag where the down is. Hydronaute XT™ protects down from moisture on the outside, but it's on the inside of the bag where Hydronaute XT™ really proves its worth. Moisture vapour produced by the body can condense in the down of the sleeping bag reducing its ability to loft. With Hydronaute XT™, moisture vapour is pulled through the membrane via a molecular chain, keeping down drier, maintaining loft and ensuring a more comfy sleep. In 2019, Hydronaute XT™ was updated. It's now more water-resistant than ever, and even more breathable.

ALPINE BAGS

Spindrift

LOFT
825-850

SPINDRIFT SERIES

The **NEW** Mont Spindrift Series sleeping bags are available in multiple weights appropriate for alpine camping, basecamps and high-altitude mountaineering.

Features

- Down distribution: 55% canopy; 45% base.
- Cross-block baffles prevent down shift.
- Radial Arc lower horizontal baffles maximises baffle loft height.
- Differential cut between inner and outer reduces compression and cold spots.
- Box-walled chambers for warmth.
- Twin interlocking down-filled '3D' draft tubes along zip retain heat.
- Contoured hood with down-filled muff.
- Internal down-filled shoulder collar.
- Drawcords on hood.
- Toaster Pocket in boxfoot for inserting an air-activated heat pack (not included).
- Tuck-stitched baffles for seam strength.

EXPED BAGS

EXPED SLEEPING BAG RANGE

The maximum outdoor experience with minimal means.

COMFORT SERIES
Wide, roomy, doona-like sleeping bags.
LITE SERIES
Trim fit mummies offering minimum weight-to-warmth.
WINTERLITE SERIES
Windproof, cold-weather sleeping bags.
WATERBLOC SERIES
Patented waterproof welded seam technology.

Features of Exped bags:

- Differential cut: the liner is smaller than the shell, which prevents elbows and knees from compressing down within the baffles. Every baffle is strategically designed and custom-filled.
- Water-resistant: Patented, fully taped baffle seams allow the use of natural, untreated down.
- 3D trapezoidal foot box: Better insulation due to lack of cold spots means warmer feet. Fits the natural position of the feet.
- Inner pocket: Keeps batteries and phone warm.
- Hood: Intuitive and easy-to-use hood closure system. Ergonomically placed for quick and accurate closing and opening.
- Zips: Available with left or right zips allowing two sleeping bags of the Expedition and Trekking Series to be joined together.

- Materials: Only the finest independently tested and certified materials. Lightweight, soft-to-the-touch fabrics. High-threadcount fabrics are downproof and durable. No fabrics with cheap acrylic coatings. Exped's suppliers adhere to stringent environmental standards. The fabrics used are Oeko-Tex® 100 Class 1 certified. Shell fabrics are free of PFC treatment. Exped does not use DWR treatment in liners.
- Down: Starting 2018, all Exped IDFL test results are available for viewing. Just scan the QR code on the product and learn more, or go to "verify.idfl.com/exped". Exped's RDS certification can also be viewed here as Exped has been RDS certified since 2016 for Exped's involvement in animal welfare.

RAB SLEEPING BAG RANGE

For the most extreme conditions in the world.

About Rab Bags*

- Mountaineer Rab Carrington started making sleeping bags in Patagonia over 30 years ago before settling in Sheffield, UK. Rab made kit for climbers, by climbers. In the mid-1980s, he became the first to use Pertex® in sleeping bags.
- Rab's original ethos at the core: a strong focus on using functional designs and high quality fabrics to produce premium gear for mountaineering and polar travel.
- Rab sources down with cluster ratios measured in US standards as these are truer to value.

Rab Sleeping Bag Ranges:

NEUTRINO SERIES

- Quality mummy shaped bags for hiking in the mountains.

ANDES SERIES

- Specialist bags for high altitude.

EXPEDITION SERIES

- For extreme conditions.

*NB: Rab sleeping bags are available on an order in basis only. Lead time is usually approximately 2 weeks.
